SUN, EARTH, AND MOON

The sun comes up in the morning. The sun goes down at night. This is because Earth spins around the sun.

It takes our Earth a day—twenty-four hours—to spin once around the sun. When we see sunlight, our part of Earth faces the sun. When it is dark, we are facing away from the sun.

The moon goes around our Earth. The sun is bright, so we don't always see it in the day. But sometimes, we can see the moon and the sun in the same sky.

Earth follows a big circle around the sun. It takes Earth a year to go all the way around the sun. It is a long trip of 365 days!
